

DAVID ALEXANDER HILL

AI, Automation & Full-Stack Development

CONTACT

061 058 4433
david.alexander.hill@outlook.com
Portfolio: sassblanket98.github.io
GitHub: github.com/SassBlanket98
Johannesburg, relocating to Cape Town
South African Citizen

EDUCATION

Matric
Cedarwood College, 2016

TECHNICAL SKILLS

TypeScript, JavaScript & Python
React, Node.js, Express & Fastify
PostgreSQL, MariaDB, Prisma & Sequelize
Anthropic API / Claude & LLM Integration
Agent Loops & Tool Use
MCP Server Development
Multi-Agent Systems (OpenClaw)
Playwright Automation & Monitoring
Docker, Git & GitHub Actions
Linux, Proxmox VE & PowerShell

LANGUAGES

English (Native)

CERTIFICATIONS

Kaspersky Sales Specialist · Barracuda
Certified Sales Partner

INTERESTS

Skateboarding, PC hardware, gaming and video editing

PROFILE

I build AI systems, automation and full-stack web apps, and I don't call them done until I've proven they work. At Neozeit I'm the front person on almost all of my development work. I run the requirements meetings with the client, build the system, and handle the training and support afterwards. I test the limits I put on AI agents instead of trusting them. I've been building with AI tools since 2022.

EXPERIENCE

Neozeit Nov 2023 – Present
IT Engineer, Development & Automation

- Main point of contact for clients on my development projects, covering requirements meetings, handover, staff training and on-site support.
- Led the design and deployment of a multi-agent AI system (OpenClaw) for two client companies sharing an office. Two agents are live and two more are built and waiting for rollout. The live project management agent handles ClickUp task creation, assignment, status updates and summaries from Slack. It also ranks website vulnerability alerts by severity, so they now get read and forwarded to the team.
- Built a custom ClickUp MCP server in TypeScript after finding the official one didn't support OpenClaw, and put it into the client's production agent.
- Set up tiered model use to keep costs down: reasoning models for planning and judgement, lighter models for routine execution, and plain scripts for bulk data work.
- Built an automated monitor for a medical client's website and patient booking flow, replacing about 40 minutes a day of manual checks. In its first months it caught several real issues, including a broken booking flow, page outages and data cleanup failures.
- Built and shipped full-stack web apps for clients, including a field-sales mapping platform (Express, MariaDB, Leaflet, offline PWA) and a market briefing dashboard (React, Express, TypeScript, PostgreSQL).
- Built shell-script automation for update and patch management across a client's macOS fleet of roughly 160 devices.
- Sole operator of Neozeit's Proxmox VE infrastructure (3-node cluster, RAID6 backup server). Built the cluster from scratch and moved production VMs onto it while they stayed in use.
- Other infrastructure work for Neozeit's SME clients includes a Windows Server 2025 migration for a medical client, Microsoft 365 and Active Directory.
- Promoted from Junior to IT Engineer after 4 months.

Drago Technologies Oct 2022 – Feb 2023
IT Technician

- Delivered first-line IT support for business clients, resolving hardware, software and connectivity issues.
- Assisted with desktop and laptop configuration, OS deployment and peripheral setup across client environments.

TGVision Oct 2021 – Aug 2022
TV Technician

- Diagnosed and repaired flat-panel televisions across a range of brands and screen technologies.
- Performed backlight array replacement, CoF (Chip on Film) bonding, screen replacement, capacitor replacement and mainboard repair.
- Managed repair workflow from intake through diagnosis, parts sourcing, repair execution and quality assurance.

AVeS Cyber Security Jun 2019 – Aug 2019
Intern, Technical Administrator

- Provided IT hardware and software troubleshooting support internally and for clients.
- Assisted account managers by contacting clients and communicating product and package benefits.

Earlier Roles 2016 – 2018
Au Pair · Paintball Marshal · Retail Cashier (Part-Time)

- Private Family (2018): daily transport and homework support for a school-age child. Battlezone

Paintball (2017-18): safety briefings, game flow and equipment maintenance. Riverside Liquors (2016-17): PoS operation, sales and stock queries.

KEY PROJECTS

Multi-Tenant AI Gateway · Authorised Client Deployment

Multi-agent deployment on OpenClaw for two client companies sharing one gateway: a live Orchestrator, a live project management agent (Jeeves), and two department agents that are built and waiting for rollout. Jeeves handles ClickUp work from Slack and turns website vulnerability alerts into severity-ranked summaries. Each agent's tools and memory are limited to its role and company, and I keep testing those limits.

Vantage Point · Anonymised Client Demo

Competitive-intelligence dashboard for a cybersecurity vendor, with an AI-filtered news feed, a competitor tracker, a content writer and an outreach CRM behind one login. Competitor and company research runs through a ReAct-style agent loop I wrote directly against the Anthropic Messages API, with no framework, and each tool call and result streams to the browser live. The news summariser and content writer stream their output as it's generated. React, TypeScript, Fastify, Prisma, PostgreSQL. The public demo is frontend only and runs on sample data.

Website & Booking Monitor · Medical Client

Automated monitor for a medical client's public website and patient booking system. Twice a day it loads the main pages, makes a test booking all the way through, checks the booking gets cleaned up, and sends a report that says which step failed and who needs to fix it. It replaced about 40 minutes a day of manual checks and caught several real issues in its first months.

Field-Sales Mapping Platform · Anonymised Client Work

Map of doctors, medical centres and rep territories for a healthcare sales team, with an admin dashboard, automated daily reports and a mobile PWA that queues changes offline and syncs when signal returns. Territory permissions are enforced on the server as well as in the browser. Node.js, Express, Sequelize, MariaDB and Leaflet, with TOTP 2FA and a React Native companion app.

Market Briefing Dashboard · Anonymised Client Work

Daily briefing tool for a financial advisory practice. It pulls market data and regional news, lets an operator review the articles, and sends a formatted briefing to the firm's Telegram channel. It started as a Flask prototype and I rebuilt it in React, Express, TypeScript and PostgreSQL with JWT and TOTP auth, Jest tests and GitHub Actions CI.

Personal AI Stack · Self-Hosted Personal Project

Self-hosted multi-agent setup for personal research, planning and day-to-day automation, built on OpenClaw. One agent runs on an OpenAI Codex subscription and two run on OpenRouter models. Memory is MemPalace (open source), with my own diary and checkpoint workflows on top. Each agent has its own scoped memory and toolset.

HillSkills.co.za · Public Production Site

Named, live site built end to end for a PMBIA-certified mountain bike coaching business, still hosted and managed personally. Static HTML/CSS/JS front end with a PHP contact form that sends mail over the Microsoft Graph API, since shared hosting blocks outbound SMTP.

SELF-DIRECTED DEVELOPMENT (2022 – PRESENT)

- Began coding with AI assistance in 2022, using early-generation LLMs in a manual prompt-and-paste workflow. Now works regularly with modern AI development tooling including Claude Code and Cursor.
- Self-studied Python, JavaScript, TypeScript, HTML and CSS through hands-on project work.
- Built service health monitoring scripts with automated alerting for personal web services.
- Developed data-fetching and categorisation scripts to organise and process structured datasets.
- Active GitHub portfolio at github.com/SassBlanket98 with live project repositories.
